Lemmuel Turaya

Full-Stack and Mobile App Developer

Biñan, Laguna, Philippines · turayalemmuel@gmail.com · +63 922 778 6152
Portfolio: kon2raya.netlify.app · LinkedIn: linkedin.com/in/lemmuel-turaya · GitHub: github.com/kon2raya24

PROFESSIONAL SUMMARY

Full-Stack and Mobile App Developer (with growing AI Engineering focus) — 6+ years designing, building, and shipping production platforms across logistics, real estate, marketing, education, and finance, with **9 published case studies** on the public portfolio. Specialized in **Vue.js** / **Nuxt.js** and **Laravel** on the web, **Flutter** on mobile, and clean **REST API** design. Pairs daily with **Claude Code** in a **Karpathy-style AI-augmented workflow** — prototyping and refactoring at speed without compromising code review or tests. Also built a production **autonomous AI engineer pipeline** (multi-LLM orchestration with **Claude**, **Gemini**, **OpenAI**, **OpenRouter**, and **Qwen**) wired into a real ticketing workflow with security gates, persistent chat memory, and independent test verification. Comfortable owning features from requirements through architecture, implementation, testing, and deployment. Open to remote, hybrid, or onsite roles worldwide.

TECHNICAL SKILLS

Frontend: Vue.js, Nuxt.js, React, Vuetify, JavaScript, TypeScript, HTML5, CSS3, SCSS, Bootstrap, jQuery, AG Grid Enterprise, ApexCharts, Chart.js, Pinia, Vuex

Backend: Laravel (11 / 12), PHP 8.2+, Node.js, MySQL, REST API design, JWT, Sanctum, SilverStripe, Statamic, WordPress

Mobile: Flutter, Dart, Hive, Firebase, Android Studio, mobile_scanner, Bluetooth ESC/POS, Connectivity Plus, dio, http

AI & Automation: Claude AI, Claude Code, Gemini, OpenAI API, OpenRouter, Qwen, GitHub Copilot, autonomous agents, multi-LLM orchestration, AI harness / agent service architecture, LLM-friendly documentation (Karpathy-style Obsidian wikis), prompt engineering, n8n, Zapier, Make.com, AI-Assisted Delivery, workflow automation

Integrations: SAP API, XML / SFTP pipelines, Xero, Eversign, ABN Lookup, Google Maps API, FAREYE API, SurveyJS, jsPDF, Ag-Grid Enterprise

DevOps & Tooling: Git, GitHub, GitHub Actions, Jenkins, Buddy CI, Docker, Linux, Nginx, Composer, npm, Vite, Webpack, Postman, VS Code, Storybook, Playwright

Architecture: Multi-tier RBAC, OU-scoped permissions, MySQL advisory locks (GET_LOCK), offline-first sync, write-through retry queues, dual-input scanning abstraction

Design & SEO: Figma, Adobe Photoshop, Adobe Illustrator, UI/UX, Search Engine Optimization (SEO), SEMrush, Ahrefs, Branding, Typography

Languages: English (Professional), Filipino (Native)

WORK EXPERIENCE

Senior Software Developer — Suhay OPC

Philippines July 2026 — Present

Senior software developer building web and mobile applications end to end.

Application Developer — AAI Worldwide Logistics

Philippines November 2024 — July 2026

Owned the Flutter Warehouse Management System mobile app end-to-end and shipped features across the company's Financial Management System (FMS), CRM, and Transport Management System (TMS), integrating SAP and third-party services with internal applications.

- Designed, built, and shipped a Flutter Warehouse Management System (WMS) mobile app from concept to production with 13 feature modules, 108 build releases, Bluetooth ESC/POS thermal label printing on Epson TM-P80II, and dual-input scanning (camera + hardware keyboard-wedge for Zebra / Honeywell scanners).
- Built an offline-first sync layer with Hive-backed FIFO replay queue, ensuring zero lost confirms during warehouse Wi-Fi drops; integrated Cloudflare Turnstile re-authentication with eager WebView platform initialization to prevent pigeon channel-error race conditions.
- Adopted AI-assisted delivery (Claude AI / Claude Code) to compress prototyping and refactoring cycles, with engineering judgment, code review, and tests preserved in every commit.
- Designed and implemented FMS modules: journal voucher creation, sundry expense invoice processing, inventory management, and advanced reports using Ag-Grid Enterprise and jsPDF.
- Built the SAP-to-WMS order integration by converting SAP XML payloads to JSON, generating return XML files, and managing secure SFTP transfers for downstream validation.
- Built CRM maintenance modules for Airline Rates, IATA Rates, and associated charges; created customizable customer-service forms using SurveyJS.
- Developed the Trucking Rates module in the TMS using Vuetify on the frontend and Laravel on the backend.

Software Developer — Octal Philippines Inc. (Assigned to AAI Worldwide Logistics)

Philippines October 2022 — October 2024

Two years of continuous delivery across the AAI core systems — FMS, CRM, TMS, and WMS.

- Developed the Trucking Rates module in the TMS using Vuetify (frontend) and Laravel (backend) — covering rate cards, contract pricing, and surcharges.
- Built a TMS dashboard for the transport team to monitor truck availability, deployed-truck counts, and booking frequencies, with integrated charts, filters, and data-visualization tools.
- Enhanced the Logistics Execution System (LES) UI using Vue.js for dynamic interactions, Ag-Grid Enterprise for flexible data presentation, and jsPDF for report generation.
- Integrated the FAREYE API for real-time package status updates from third-party providers and shipped a single-page package tracker for end-user delivery monitoring.
- Optimized MySQL queries and Eloquent eager-loading to keep large data tables responsive across multiple branches.

Full-Stack Developer — Uratex Philippines

Philippines March 2022 — October 2022

Internal tools, surveys, and brand landing pages supporting operations and marketing teams.

- Designed and developed customer-facing and internal surveys in Laravel with detailed reporting to analyze demographics and survey response patterns.
- Created a Trip Management System for scheduling and booking company vehicles, improving resource management and accessibility for the operations team.
- Collaborated with cross-functional teams to design and develop the corporate landing page, aligning visual design with brand objectives.
- Shipped a dynamic landing page for the company's basketball association featuring a live countdown timer, built on the Statamic CMS for content-team self-service updates.

Marketing Staff (Full-Stack Developer) — Lumina Homes, Inc.

Philippines March 2021 — March 2022

Hybrid role combining full-stack development with digital marketing — built the technology and SEO that powered the marketing team's lead pipeline.

- Developed, maintained, and optimized websites, landing pages, and applications supporting marketing campaigns and demand generation.
- Enhanced the property-listing loan calculator to allow public users to compute amortization details and receive results via email — increasing lead-capture conversion.
- Optimized and maintained the real-estate website on SilverStripe, ensuring a seamless user experience across desktop and mobile.
- Implemented Search Engine Optimization (SEO) best practices using SEMrush and Ahrefs to manage and improve site visibility and organic traffic.
- Continuously evaluated emerging technologies and marketing tools and recommended solutions aligned with business goals.

Junior Web Developer — Switch Connect Pty Ltd

Australia (Remote) August 2019 — September 2020

Contributed to the company's ERP system, integrating multiple third-party APIs to streamline accounting, validation, and document workflows.

- Developed ERP modules that enhanced functionality and optimized day-to-day business processes for accounting and operations teams.
- Integrated the Google Maps API for address validation in user accounts, ensuring accurate location data and reducing manual correction overhead.
- Implemented ABN Lookup for verifying Australian-based companies through an authorized government API.
- Integrated Xero for financial management — receipt generation and order monitoring — and Eversign for multi-party digital document signing.

Graphic Designer — Trimex Colleges

Philippines January 2019 — December 2019

Visual collateral for institutional campaigns, events, and publications.

- Designed posters, banners, social-media creatives, and event branding on tight deadlines using the Adobe Suite (Photoshop, Illustrator).
- Refined design fundamentals (typography, layout, hierarchy) that still inform current UI and UX work.

SELECTED PROJECTS

LLM-Friendly Wiki (Karpathy-style Obsidian Vault) — Enterprise WMS Codebase

Hand-maintained Markdown knowledge base documenting a large enterprise WMS codebase, designed so human engineers and AI coding agents share the same context. Every page has YAML frontmatter (source_paths, db_connection, related, tags, last_verified). Per-folder _INDEX.md cuts agent token cost; same-turn-update rule (edit source → update wiki in same commit) keeps the vault current. Folders: Architecture, Backend (Controllers / Models / Services / Jobs), Frontend (Pages / Components / Store), Database, Decisions (ADRs), Runbooks, Modules, Workflows, Integrations, Examples, Rules, Tutorials. Inspired by Andrej Karpathy's thesis that the most valuable artifact for AI-assisted coding is a well-structured wiki of your own code. Case study: kon2raya.netlify.app/case-studies/llm-wiki.html

WMS v2 Inventory Rewrite (Laravel 12 + Vue 3) — Enterprise Logistics Operator

Active rewrite of a legacy enterprise warehouse / inventory system onto Laravel 12 + Vue 3, organized around a single canonical V3 list-page pattern (`receiving.vue`), a BaseCrudController + BaseCrudService foundation, and a ModuleSchemaInterface that drives module/rowKey/grid/form/filters/statCards/workflow/enums. CI-enforced architectural guardrails via ESLint (`wms/no-inline-grid-columns`, `wms/no-axios-in-views`) + PHPStan (`wms.controller.no-inline-query`, `wms.reports.no-get`, `wms.no-direct-audit-write`) + a migration linter requiring online DDL (`ALGORITHM=INPLACE, LOCK=NONE`) and EXPLAIN snapshots. ~103 Eloquent models, ~76 controllers, ~121 migrations, ~130 Vue pages. Parity-first rollout module-by-module behind a toggle. Karpathy coding guidelines in the agent guide. Case study: kon2raya.netlify.app/case-studies/wms-v2.html

Autonomous AI Engineer (Multi-LLM Agent Pipeline) — Enterprise Ticketing

Production multi-LLM autonomous AI engineer wired into a real Laravel 11 ticketing system. `php artisan ai:work {ref}` picks up tickets in ASSIGNED board status, auto-detects the target repository from a systems mapping table, dispatches to the operator-chosen brain (Claude, Gemini, OpenAI, OpenRouter, Qwen), persists per-ticket conversation in AIChatMemory, and writes a session record. A separate `ai:verify` command runs the real PHPUnit suite against the candidate change and logs pass / fail to the ticket comment thread before any human merge. `tickets:auto-close` nightly closes tickets in deployed status untouched for 72+ hours. Five interchangeable agent service classes behind one AiHarnessService — adding a new LLM brain is a one-class change. Case study: kon2raya.netlify.app/case-studies/ai-engineer.html

Transport Management System (Vue 3 + Laravel 11) — Enterprise Logistics Operator

Full-stack TMS that runs an enterprise logistics operator's transport arm end-to-end — bookings → dispatch → live GPS → costing → incidents → maintenance → invoice. Spatie Laravel-Permission for fine-grained RBAC, ChangesApproval + DataRestriction for sensitive-edit gating, trucker partner registry with rate cards / suspensions / compliance docs, fleet checklists, and a live-GPS dashboard. ~68 Eloquent models, ~99 controllers, ~98 migrations, ~324 Vue pages across 20+ domain folders. Velzon admin theme, AG Grid Enterprise tables, DomPDF documents, Excel bulk import/export via maatwebsite/excel + mavinoo/laravel-batch. Case study: kon2raya.netlify.app/case-studies/tms.html

WMS Mobile App (Flutter) — Enterprise Logistics Operator

Cross-platform Flutter mobile app running scan-driven receiving, picking (three iterations: base, enhanced, v3), dispatch, validation, count-sheets, and stock movement with Bluetooth ESC/POS label printing on Epson TM-P80II. 13 feature modules, 108 build releases, offline-first replay queue, dual-input scanning. Companion Nuxt admin and Laravel REST API with ~251 Eloquent models, ~103 controllers, ~315 migrations. Case study: kon2raya.netlify.app/case-studies/wms.html

Real-Estate Developer Portal — Confidential Client

Full-stack platform that runs a real-estate developer end-to-end: projects, units, reservations, sales (equity + amortization), in-house financing, commission ledgers, collection receipts, sales returns, assumed units, with a 5-tier seller hierarchy (Directors → Managers → Unit Managers → Team Leaders → Salespersons / Brokers) and OU-scoped CASL role-based access control. Vue 3 + Bootstrap Vue 3 + AG Grid Enterprise, Laravel 11 + MySQL + JWT auth. ~65 Eloquent models, ~67 controllers, ~99 migrations, ~102 Vue views. Case study: kon2raya.netlify.app/case-studies/pamanaland.html

Brokerage Commission System — Confidential Client

Full-stack platform powering an entire real-estate brokerage: multi-tier commission engine (CommissionTransaction → CommissionShare → CommissionRelease) with approver workflow, multi-OU RBAC, sales pipeline, expenses, and HR-lite (payslips, leaves, memos). 52 Eloquent models, ~100 migrations, ~640 combined commits across the API + UI repositories over 22 months. Vue.js + Velzon admin theme + Laravel + MySQL. Case study: kon2raya.netlify.app/case-studies/jbc.html

Enterprise HRIS — Confidential Client (under NDA)

Modern HRIS covering the complete employee lifecycle — records, organizational units, time and attendance, leave, payroll (with government contribution tables, tax tables, 13th-month records), memos with concurrency-safe sequential numbering via MySQL GET_LOCK advisory locks, performance evaluations, official-business / overtime / offset request flows — under OU-scoped RBAC with TOTP 2FA (Google Authenticator). Laravel 12 + Sanctum + DomPDF on the API; Vue 3 + Vite + Pinia + TypeScript + Vuestic Admin + AG Grid Enterprise + Storybook + Playwright e2e on the frontend. CI/CD on both Jenkins and Buddy. ~54 models, ~41 controllers, ~57 migrations, ~95 Vue pages.

@ph-dev-utils — Open-Source Filipino Developer Utilities (12-package family)

Open-source family of 12 focused packages encoding Philippine-specific logic for both JavaScript/TypeScript (npm, @ph-dev-utils/*) and PHP (Packagist, phdevutils/*) — peso formatting and English/Tagalog number-words, ~10 government-ID validators (TIN, SSS, PhilHealth, Pag-IBIG, PhilSys, UMID, passport, PRC, license, plate), the full PSGC address hierarchy (42,046 barangays), 2,048 ZIP codes, 1,573 city/municipality coordinates, 158 banks/e-money institutions, payroll (SSS / PhilHealth / Pag-IBIG / BIR withholding to net take-home), BIR tax math, holiday-aware dates, seedable fake data, and a React address picker. 11 of the 12 publish identical behavior on both npm and Packagist, so a PHP backend and a JS frontend agree by construction. Fronted by a React 19 + TypeScript + Vite live playground (deployed on Vercel) that imports and runs the real published packages, so the showcase doubles as the family's integration test. Case study: kon2raya.netlify.app/case-studies/ph-dev-utils.html

Personal Portfolio — kon2raya.netlify.app

Hand-crafted HTML, CSS, and vanilla JavaScript portfolio with light/dark theme toggle, interactive dev terminal (real commands), command palette (Ctrl+K), live visitor counter, GitHub activity graph, recent-repos panel, and a published changelog + JSON Resume + /now page + RSS feed + machine-readable /api/availability.json endpoint. Zero frontend frameworks on the cyber-themed layer. Deployed on Netlify.

EDUCATION

Bachelor of Science in Information Technology

Trimex Colleges, Philippines · June 2015 — April 2019 · GPA 1.50 (Dean's Honor scale)

Relevant coursework: Web Development, Database Management, Programming (multiple paradigms), Software Engineering, Computer Networking.

LANGUAGES

English — Professional working proficiency **Filipino** — Native
